Bios References Category:BIOS Category:Dell laptop computersKuparuk River The Kuparuk River, formerly known as the Eskimo River, is a river in the U.S. state of Alaska. It is approximately long. Beginning at the confluence of the Noatak River and the Kuniva River in the Noatak National Preserve, it flows west-northwest through the Noatak, Kuparuk, and Noatak River Drainages. Its mouth is approximately northwest of Nenana and it is joined by the Nenana River from the west approximately upstream of its mouth. The principal river exits from the north-central mountains are the Nenana River and the Noatak River. Tributaries include the Nelchina and Nenana Rivers, the latter of which is sometimes considered the main stem of the Kuparuk. The name "Kuparuk" is from the Inupiaq language meaning 'white water'. See also List of rivers of Alaska References Category:Rivers of Alaska Category:Rivers of Fairbanks North Star Borough, Alaska Category:Rivers of Yukon–Koyukuk Census Area, AlaskaQ: Grabbing the value of a particular element in a list based on a set of rules If I have a list of values, I would like to be able to grab the value of an element in the list based on a set of rules. For example, lets say the list is List and the rules I have to follow are: if the value is odd if the value is even if the value is not odd then the value is numbers = {1,2,4,8,9,13,17}; If there were
